Carr, Vegetation Fire, Shasta County (Continued)

Critical Infrastructure

- Redding Electric – Residents without power 400
- Pacific Gas & Electric – Residents without power 3,876 and 612 without gas
- Power Plant Operations:
 - Shasta, Keswick, and Trinity Power Plants are operational. All operating power plants are being staffed 24/7. There is no threat or concern to infrastructure at this time. All other USBR power plants in the affected area remain offline and will not restart until after the area is cleared for entry, and the infrastructure is evaluated for safe operation. Additional updates will be provided as information becomes available.
- Trinity Power Plant Water Releases Update
 - The Bureau of Reclamation (BOR) reports that Trinity River flows have been reduced to 800 cubic feet per second (cfs), as sufficient freeboard was achieved through releases from Lewiston Dam. The releases are not a threat to the environment nor to downstream communities – there is no threat of flooding.
- Spring Creek Detention Dam
 - There is no concern about either Iron Mountain Mine Superfund Cleanup Site or Spring Creek Detention Dam posing a threat to public safety, environment, or water quality.
- Iron Mountain Superfund Site
 - The concern is that the compromised pipe might create a hostile environment for both people and equipment.
 - A Multi-agency working group has been initiated in the SOC. The working group is developing a separate informational document for the UCG.
- City of Redding – Water Treatment Plant
 - The water treatment plant has been placed at the top of the priority list for restoration
 - Potential threat identified at the Clear Creek CSD water treatment plant. One full one-ton cylinder and two empty one-ton cylinders that contain chlorine gas.
 - Threat to chlorine cylinders at Clear Creek CSD abated. Cal EPA provided recommendations and resources on 7/28/18 regarding safety when in proximity to the treatment plant until better situational awareness was available.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

***** Hot and Dry with Poor Overnight Relative Humidity (RH) Recovery Inland from the Coast through Tuesday *****

***** SW-NW Gusts 15-25 mph through Coast Range Gaps and Passes into Western Sacramento Valley Afternoons and Evenings Daily through Tuesday *****

A strong ridge of high pressure over the West Coast will continue to bring hot and dry conditions to the region away from the coastal areas through Tuesday. Maximum temperatures will be 5 to 10 degrees above normal, with mid 80s to mid 90s across the mountains and upper 90s to 105 in the valleys. Minimum humidity will be mainly in the single digits and teens, with nighttime humidity recovery between 30% and 50%. Gusty westerly winds of 15 to 25 mph will surface through the canyons and passes of the coastal mountains and into the western part of the Sacramento Valley each afternoon and evening through Tuesday. The high pressure will weaken bringing a slow cooling trend to the region Wednesday through the end of this week. Minimum humidity will still be quite low above the marine layer, but there will be an increase in nighttime humidity recovery. Southwest to west afternoon and evening gusts to 30 mph will surface across areas from the Cascade-Sierra Crest eastward Wednesday through Friday. A Pacific trough may drop down the West Coast bringing significant cooling to the area this weekend. This trough will bring strong and gusty southwest to west winds to areas east of the Cascade-Sierra Crest this weekend. No shower or thunderstorm activity is anticipated across the region through this weekend.

SOUTHERN CALIFORNIA

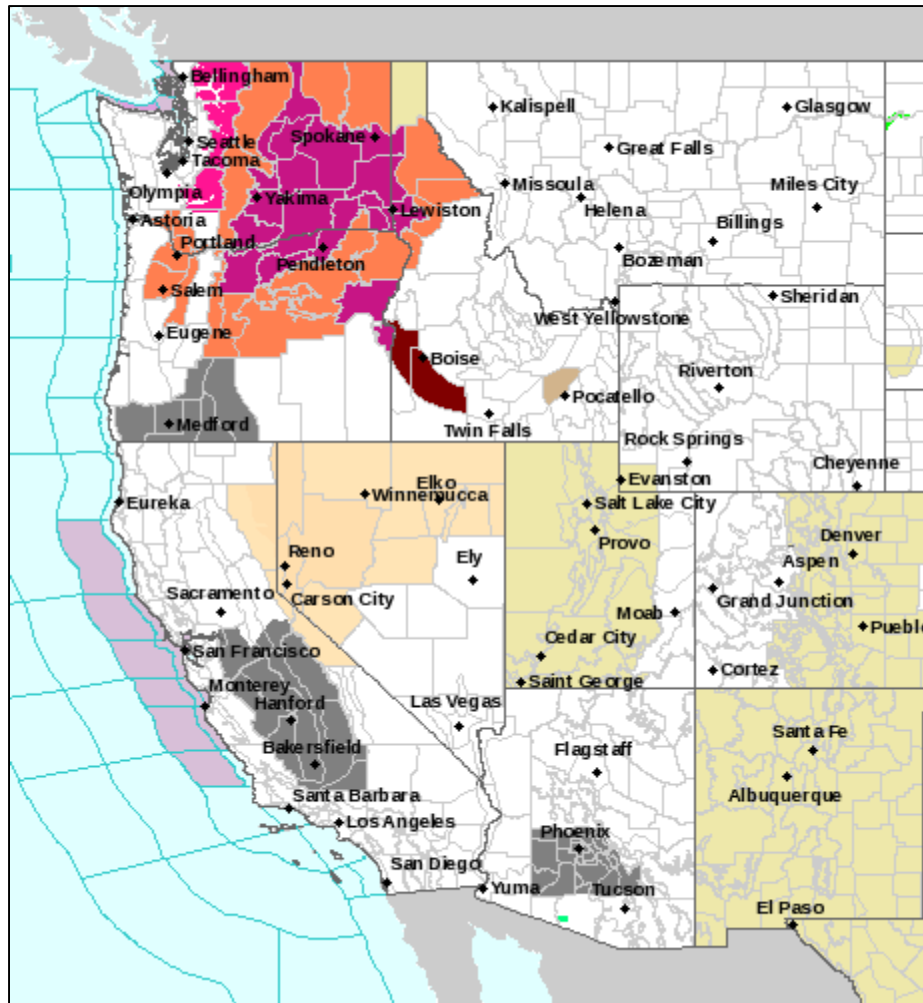

*****Increasing wet thunderstorms across Southern CA*****

*****Well above normal temperatures across inland areas this week*****

*****Low afternoon RH over Central CA through Friday*****

A surge of Monsoon moisture will move into the southern portions of the state Tuesday with increasing chances for wet thunderstorms across the mountains and deserts, including the Sierra. An easterly steering flow may allow some storms to drift into the inland valley and foothill areas during the next couple of days, but in general the lower elevations will stay dry. It will remain hot across the inland areas this week with daytime highs generally ranging from the upper 90s to near 103 in the inland valleys and in the 80s to mid-90s in the mountains below 6,000 feet. Humidity values will be in the 8-15% range across foothills surrounding the San Joaquin Valley most days this week, but otherwise most areas will see minimum humidity values above 20% except lower across the deserts. Winds will generally be variable below 15 mph across the region except strong and gusty in and near thunderstorms. Drier air will begin to push into the district later this week with thunderstorm coverage decreasing after Wednesday, but some lightning will still be possible across parts of the Mojave and eastern areas near the Colorado River through the end of the week. Temperatures will continue to be 5-10 degrees above normal into next weekend.
